## Problem List

Problem	Entered	Resolved	Priority	Class
Sepsis due to streptococcus, group a, with abscess LLE [038.0, 041.01, 995.91]	5/27/2012	1/8/2013	High	

Patient with recent surfing trip in Indonesia (returned 5/22) with some foot and ankle abrasions surfing, then ankle inversion injury with strain 5/23. Presented to ER 5/27 with ongoing fever and chills as high as 40.2 this am. Also with bandemia, falling platelets, mild hypotension, and evidence of volume depletion, suggesting early sepsis syndrome.

Brought to OR by Dr. Miyashiro yesterday with findings of purulent drainage from leg, fascia looked intact, small amounts of necrotic muscle. Possible very early necrotizing fasciitis. Cultures growing Group A strep.

Today is just starting to turn the corner, with increasing urine output, Levophed now off

## Problem List (continued)

Problem	Entered	Resolved	Priority	Class
(from high of 20), Lactate falling, creatinine rise slowing, afebrile. Continue aggressive support with IV fluids, IV antibiotics -will DC Doripenem as no gram negatives, continue clindamycin for antitoxin properties, and per Dr. Yoon will start Ceftriaxone for Group A strep in patient with PCN allergy. Vancomycin DC'd also, no staph. Examined wound with Dr. Miyashiro and Dr. Yoon at the bedside (staples removed and wound opened). All tissue healthy and perfused. Slight amount of milky but mostly serousanguinous drainage. Dr. Miyashiro plans to take back to OR for wash out again this afternoon. continue ICU care				
<b>Fever [780.60]</b>	5/28/2012	5/29/2012	High	
30-year-old with recent travel history. Returned 5/22 from a surfing trip in Indonesia. He was seen in the emergency department May 24 complaining of 2 days headache, fever, nausea vomiting and myalgia with impression of viral syndrome and left ankle strain. White blood cell count was 14.9 at that time. Over last 2 days he has developed high fever 102-104, with mild headache, fatigue, occasional dry cough. No nausea or vomiting or diarrhea. Slight conjunctival injection, febrile, resting tachycardia rate 105. Lungs are clear, abdomen nontender. Left leg at this point seems to be the focus; however, non-specific constitutional symptoms and fever before leg looked swollen could suggest other sources. Await leptospira panel, malaria smear, urine culture and blood cultures. Will likely consult Dr. Yoon in the am for further advice. Continue broad spectrum antibiotics				
<b>Pyuria [791.9]</b>	5/28/2012	1/8/2013	Medium	
Sterile pyuria as a reaction to systemic illness.				
<b>Shock liver [570]</b>	5/29/2012	1/8/2013	Medium	
Transaminases up in the setting of severe sepsis and hypotension, consistent with shock liver				
<b>Acute renal failure (ARF) [584.9]</b>	5/29/2012	1/8/2013	High	
Oliguric renal failure due to shock. Starting to make some urine this am, CVP high and patient + almost 11L yesterday. Expect will recover spontaneously with continued supportive care. K+ slightly high, but currently not in need of treatment. Should fall as urine output picks up.				
<b>Decreased ejection fraction [794.39]</b>	1/8/2013	2/21/2013

Matthew R Leimbach - 30 yr old male

**Date of Service:** 5/24/2012 Arrival Time: 1205

**Chief Complaint:** WEAK (started 2 days ago, recent travel in asia, nausea, vomited once last night, headache), ANKLE INJURY (It ankle pain after jumping out of a truck testerday)  
- as per triage nurse.

HPI 30-year-old male just returned from a trip to Indonesia with complaints of fever, body aches and nausea and vomiting with a headache. These symptoms have been ongoing for 2 days. The patient states he was exposed to possible malaria with mosquito bites and did not use any malaria prophylaxis. The patient is also complaining of an ankle injury he sustained yesterday when jumping out of a truck he twisted his left ankle.

**Review of Systems**Constitutional: Positive for **fever**.

HENT: Negative for ear pain.

Eyes: Negative for redness.

Respiratory: Negative for shortness of breath.

Cardiovascular: Negative for chest pain.

Gastrointestinal: Positive for **vomiting**. Negative for abdominal pain.

Genitourinary: Negative for flank pain.

Musculoskeletal: Positive for **myalgias**. Negative for back pain.

Skin: Negative for rash.

Neurological: Positive for **headaches**.

Hematological: Does not bruise/bleed easily.

Psychiatric/Behavioral: Negative for agitation.

All other systems reviewed and are negative.

**Past Medical History:** The patient has no past medical history on file.**Past Surgical History:** The patient has no past surgical history on file.**Family History:** The patient's family history is not on file.

**Social History:** The patient reports that he has never smoked. He has never used smokeless tobacco. He reports that he does not drink alcohol or use illicit drugs.

The patient was accompanied by: None

**Allergies:****Allergies**

---

**ED Provider Notes (continued)**

Multiple diagnoses were considered given the patient's presentation and chief complaint and their related co-morbidities. The patient was carefully evaluated to appropriately address the presenting complaint and significant testing was done to carefully evaluate and help rule out an imminent or life-threatening problem. The laboratory and imaging studies were interpreted and reviewed by myself which aided in the overall assessment and plan.

**ED Prescriptions**

None

Pharmacy Requested for Faxed Prescriptions:

**Diagnostic Impression:** Viral infection  
Sprain of ankle

**Disposition:** Discharge

Discharge was medically appropriate. I discussed discharge instructions, follow-up and reasons to return to the Emergency Department. See the printed discharge instructions for details. The patient was discharged in satisfactory condition.

GFR (Non-African Amer)	>60	>59 mL/min/1.73m2		-	CLH_X
GFR (African American)	>60	>59 mL/min/1.73m2		-	CLH_X

Comment:

Average GFR for 30-39 yr: 107

Chronic kidney disease: &lt;60

Kidney failure: &lt;15

Accuracy of the GFR depends on a stable creatinine and may be overestimated in malnutrition, cachexia, and cirrhosis due to reduced muscle mass.
